A passionate Web Developer with over 2 years of hands-on experience in building dynamic websites using Laravel, Vue.js, React, and various modern frameworks. I graduated with a Bachelor of Computer Science from Karen Baptist Theological Seminary (LAP) in August 2023. Throughout my professional journey, I've developed and maintained multiple web applications, implemented responsive designs, and collaborated with cross-functional teams. My expertise spans both backend development with PHP/Laravel and frontend development with JavaScript frameworks. I'm proficient in building RESTful APIs, managing databases, and implementing modern UI/UX practices. Currently seeking opportunities to contribute my skills and experience to challenging web development projects.

Experience

Junior Software Engineer at 5BB Broadband - Global Technology Group

(2023 - Present)

- Collaborated on design and development with cross-functional teams to deliver web applications

- Managed WiFi installation projects and implemented data storage systems for maintenance tracking

- Developed and maintained RESTful APIs to support mobile application functionality and integration

- Performed quality assurance and maintenance for web applications to ensure optimal performance and user experience

Junior Frontend Developer - Intern at Klonotech (April - July 2022)

- Developed responsive web interfaces and implemented modern frontend practices with Vue.js

- Gained hands-on experience with RESTful API integration and mastered Vue.js framework fundamentals

Education

Bachelor of Computer Science - Liberal Art Program (KBTS) (2018- 2023)

Specialized in web development and programming, graduating with a Bachelor of Computer Science degree.

Bachelor of Science (Mathematic)- West Yangon University (2018 - 2020)

Completed two years of Mathematics studies before transferring focus to Computer Science.

Projects

Knowtopix Social And Blogs Web (2023)

KnowTopix is a social media and blogging platform where users can create posts and engage with each other through various interactions. The blogging feature is designed for writers and knowledge sharers to share valuable content with the community.

Hi Wallet (2023)

Hi Wallet is a digital wallet system that allows users to transfer funds between accounts. It includes a QR code scanning feature along with other transaction processes. I learned about this concept and its coding implementation from a YouTube course.

https://github.com/SawSoeLinnHtet/hi-wallet-app

Cinema Plus (2022)

Cinema Plus is a platform for movie enthusiasts, providing the latest and trending movie updates. Users can watch trailers and stay informed about upcoming releases. This project is powered by APIs from The Movie Database (TMDb) and was my starting point for learning Vue.js.

Mahar Bote Pyin Nyar - Beta (2023)

Mahar Bote is an astrology-based system that, unlike traditional astrology, does not predict exact dates or events. Instead, it emphasizes personal choice and karma—what happens depends on one's own actions. If you take action, you

receive results; if you don't, you won't. This knowledge helps distinguish what is truly beneficial based on one's own deeds.

This project uses **Supabase API** for data storage and management.
